Developer Portfolio Generator

(Markdown to Website)

1. Introduction

In today's digital world, developers need an online portfolio to showcase their skills and projects. However, many beginners find it difficult to design and host a professional website.

The Developer Portfolio Generator is a simple web application that converts Markdown-based resumes into a styled portfolio website. It allows users to write content in Markdown and instantly generate a live preview with customizable themes. The main goal of this project is to simplify portfolio creation using basic web technologies.

---

2. Abstract

The Developer Portfolio Generator is a front-end web application that transforms Markdown content into a visually attractive portfolio. Users paste their Markdown resume into a text area, and the system converts it into formatted HTML using a Markdown parser library.

The application includes aesthetic themes, live preview functionality, and interactive UI elements. It is built using HTML, CSS, and JavaScript, making it beginner-friendly and easy to understand.

This project demonstrates practical knowledge of DOM manipulation, Markdown parsing, and UI/UX design.

---

3. Tools Used

- **HTML5** – Structure of the web application
- **CSS3** – Styling and theme design
- **JavaScript** – Interactivity and functionality
- **Marked.js** – Converts Markdown into HTML
- **VS Code** – Code editor
- **Web Browser** – Testing and preview

---

4. Steps Involved in Building the Project

1. **Project Setup**
    - Created folder structure.
    - Added index.html, style.css, and script.js.
    - Linked CSS and JavaScript files.
2. **UI Design**
    - Added textarea for Markdown input.
    - Created preview section.
    - Designed aesthetic pastel theme with modern UI elements.
3. **Markdown Integration**
    - Added Marked.js CDN.
    - Created function to convert Markdown into HTML.
    - Displayed parsed content in preview section.
4. **Theme & Enhancements**
    - Added light and dark themes.
    - Implemented theme switching.
    - Added popup message and hover animations.
5. **Testing**
    - Tested various Markdown formats.
    - Checked responsiveness.
    - Fixed styling and functionality issues.

---

5. Conclusion

The Developer Portfolio Generator successfully converts Markdown into a styled and customizable portfolio website. It demonstrates strong fundamentals in front-end development, including layout design, DOM manipulation, and UI styling.

This project is simple, practical, and interview-ready. It enhances core web development skills and provides an easy solution for creating online portfolios.
